

INTERPEAK

Company Presentation

interpeak

Introduction

Interpeak is a company at the peak of Internet technology, dedicated to provide security and networking to embedded systems using the Internet. For the world industry, the Internet represents an opportunity to add significant new functionality to products such as vehicles, wireless devices, telecom equipment and consumer electronics. Additionally, giant cost reductions for service and support are possible. For these reasons, it is expected that billions of embedded systems will be connected to the Internet over the next few years.

The total number of devices and human users will far outstrip the capacity of the current IPv4 technology. The only way forward is the new IPv6 standard, with capacity to address millions of devices for each square millimetre of the face of the Earth.

Interpeak has launched two networking stacks with the capability of supporting the current IPv4 standard simultaneously with the new IPv6 standard. One stack supports from the smallest and most constrained devices

up to the middle range. The other stack fully supports even the most powerful routers and other devices on the Internet.

Another challenge is that connecting to the Internet will unfortunately expose devices to security threats from competitors and hackers. It may prove more tempting to hackers to be able to attack cars and phone systems than office mail. Users will be tempted to interfere with billing from embedded devices. These are just a few examples of threats that face embedded systems on the Internet.

However, recent advances in security technology provide embedded devices with encryption to protect sensitive data, authentication to stop intruders and integrity to prevent tampering with data. With access to this technology, embedded systems can now safely tap the power of the Internet.

The Interpeak corporate mission is to provide state-of-the-art networking and security software products and services to the embedded systems companies.

Owners

Interpeak is owned by its founders, SEB Företagsinvest and Ledstiernan.

The SEB Group is a North European financial banking group for companies, institutions and private individuals, with 670 branch offices around Sweden, Germany and the Baltic States. SEB has more than 4 million customers, of whom 1.5 million are e-banking customers. The Group is represented in some 20 countries around the world and has a staff of about 18,000.

Ledstiernan is one of the leading venture capital companies in the Nordic region, investing in the IT and telecom sectors with a special focus in communication technology. Ledstiernan's strategy is to play an active role in the development of these companies, add value and generate growth.

The founders have a 20 year experience in the embedded industry and have pioneered the development of real-time operating systems and networking stacks with exceptional performance.

Personnel

Interpeak's development team is uniquely experienced in the merge of embedded technology, networking and network security. The sophisticated technology required at the forefront of the internet business is highly complex and requires expert designers. Interpeak has one of the premier development teams in this area, with long experience and advanced training, several members have advanced academic degrees.

Partners

Interpeak has partnerships with major real-time operating system vendors such as Green Hills, ENEA, Wind River Systems and Accelerated Technology. Interpeak also has partner relations with the leading routing software companies IpInfusion, NextHop and Data Connection, integrating their software with the Interpeak product portfolio. Integrations are also available with the products of other major embedded software companies such as SNMP Research and OIS.

Interpeak provides Internet networking and security products, marketing material and support that add significant value to the partner's offerings. Their sales force will use Interpeak products to close more sales. The number of partners will increase continuously.

Interpeak has a staff of engineers and commercial partner managers to support our partners and the integrations with their products. In addition to the partner sales channel, embedded designers looking for security and networking products will also be able to find them and our partners on the web page, www.interpeak.com.

Products

Interpeak has numerous products and services that secure embedded systems connected to the Internet. Examples are Mobile IP, DHCP v6/v4 Servers, SSH, SSL, IPSec, IKE, NAT, LDAP and L2TP, as well as IPv4/IPv6 protocol stacks. Being highly portable, they are available on a range of successful embedded operating systems. All Interpeak

products are written in portable ANSI C of excellent quality. The products are supported by Interpeak professional services which can adapt and integrate the products for specific security requirements.

Due to scarce expertise, cost and time-to-market, most of the embedded industry has elected not to maintain in-house resources to design and implement security. For this reason, Interpeak has a range of turnkey embedded security solutions, which require no dedicated security skills at the customer. Interpeak assumes full responsibility for a complete solution. Interpeak designs the security, provides products, configures the products, installs the security software and finally supports it. When additional tools or functionality is required, Interpeak will design and implement it.

Since Interpeak has control of the security design, products and implementation in a turnkey solution, Interpeak can certify the security of the embedded system, lending significant credibility to the security properties of the customer's product.

Interpeak Secure Networking Software

Interpeak provides state-of-the-art networking solutions specifically designed for embedded systems. The company's embedded networking and security software is currently used in thousands of applications across the globe.

Headquartered in Stockholm, Sweden, Interpeak operates through a global network of distribution channels and has its own sales and field application force dispersed in strategic locations worldwide, including the USA, Europe, and Asia.
